

## GYSTC Platform Accessibility

### ACCESSIBILITY MENU/PROFILES

**MOTOR IMPAIRED** - Manipulating a mouse and keyboard to navigate sites isn't always easy for people with motor impairments. UserWay consults with motor-impaired individuals to develop tools that can help. This profile provides options that make site navigation much less complicated.

**BLIND** - When a website isn't structured properly, the assistive technologies the blind rely upon aren't effective. And if navigation and shopping carts present barriers to access, these visitors have no choice but to abandon inaccessible sites.

**COLOR BLIND** - Since everyone doesn't see colors the same way, UserWay works with color blind individuals to determine what features they find helpful, then groups them together in this profile to provide relevant suggestions.

**DYSLEXIA** - It is estimated that 1 in 5 people worldwide have dyslexia, but many have not been diagnosed. This profile provides customization options that can help improve reading comprehension and fluency.

**VISUALLY IMPAIRED** - There are a number of adjustments that can make websites easier to navigate and read for people with impaired vision. This profile provides suggestions that can be helpful for a variety of conditions.

**COGNITIVE & LEARNING** - Cognitive impairments and learning disabilities can have a profound effect on reading comprehension. The tools included in this profile can help improve reading experiences and help viewers identify relevant information.

**SEIZURES & EPILEPTIC** - Flashing page elements, animations, and videos can sometimes trigger seizures in people with epilepsy and similar conditions. This profile provides a way to pause animations and other helpful customizations.

**ADHD** - A number of tools are available that can help visitors stay focused as they move through a webpage. The recommendations included in this profile may help alleviate distractions to improve reading comprehension.
